# Keep your restaurant equipment making you money

Every minute that your equipment is down, you're losing money. In fact, the average restaurant owner spends between $500 and $2,500 each month on equipment repairs. Preventative equipment maintenance saves restaurant owners thousands of dollars each year. Despite that fact, most restaurants don't keep up with PM tasks for their ovens, freezers, coffee makers, and other frequently used machines. Why? It's a hassle. But QSRSoft's Equipment solution just made it so easy.

Here's how QSRSoft Equipment works for you:

Increase equipment reliability with regular planned maintenance

Maximizing the lifespan of your equipment and preventing costly downtime and repairs takes effort. Frequent cleaning, inspecting, and replacing damaged or missing parts is critical. Our QSRSoft Equipment solution breaks these important steps down into automated tasks that you can assign to staff, track their progress, and check off when complete. Customize these PM tasks according to your priorities and the equipment's instructions, setting daily, weekly, monthly, yearly, or custom real-time alerts to let you know when something needs to be done.

Save time when things break using an easy ticketing repair process

Though PM keeps your equipment running smoothly for longer periods, breakdowns do happen. When they do, having a plan in place will minimize downtime and get you back on your feet faster. The QSRSoft Equipment solution gives you visibility for each step of the repair process, from ticketing to completion. It helps you stay organized and track repairs in all locations, so you know what needs to be done, and how close you are, to getting back up and running.

Make stronger reinvestment decisions with asset management

Keep track of all your equipment—in all locations—with our QSRSoft Equipment solution. Having a central location for managing multiple locations means you can easily identify where you can save money by reallocating funds or relocating equipment. And it helps in deciding whether a repair job or an investment in new equipment is the next smart move. The best part? Thanks to QSRSoft Equipment metrics, the decisions you make will be based on data, instead of guesswork, meaning less of your time and money wasted.

Rest easy, knowing equipment is operating efficiently with real-time alerts

Never be the last to know when equipment breaks down. Our QSRSoft Equipment solution sends real-time alerts when a piece of equipment malfunctions or stops working. These alerts are sent to your desktop and devices, so you can plan repairs immediately and avoid a ton of downtime and lost sales. You'll get alerts for any location, allowing you to manage equipment repairs for multiple locations remotely. And the peace of mind you'll get knowing that everything is running smoothly? Priceless.

Get anytime, anywhere visibility into all equipment statuses in all locations

Get at-a-glance updates on all your equipment—in one or all of your locations—on your computer or smartphone. Just a couple clicks and the QSRSoft Equipment solution shows you whether everything is operating as it should, or where you're having equipment issues. Check it from any device, at any time—or simply do nothing until you get a real-time alert letting you know there's a problem. Either way, it's equipment management at it's finest: fast and from anywhere.
